

PROGRAMME ENGINEERING

During the first year, you will be introduced to broad technical basic skills. This will help you find out which specialization suits you best.

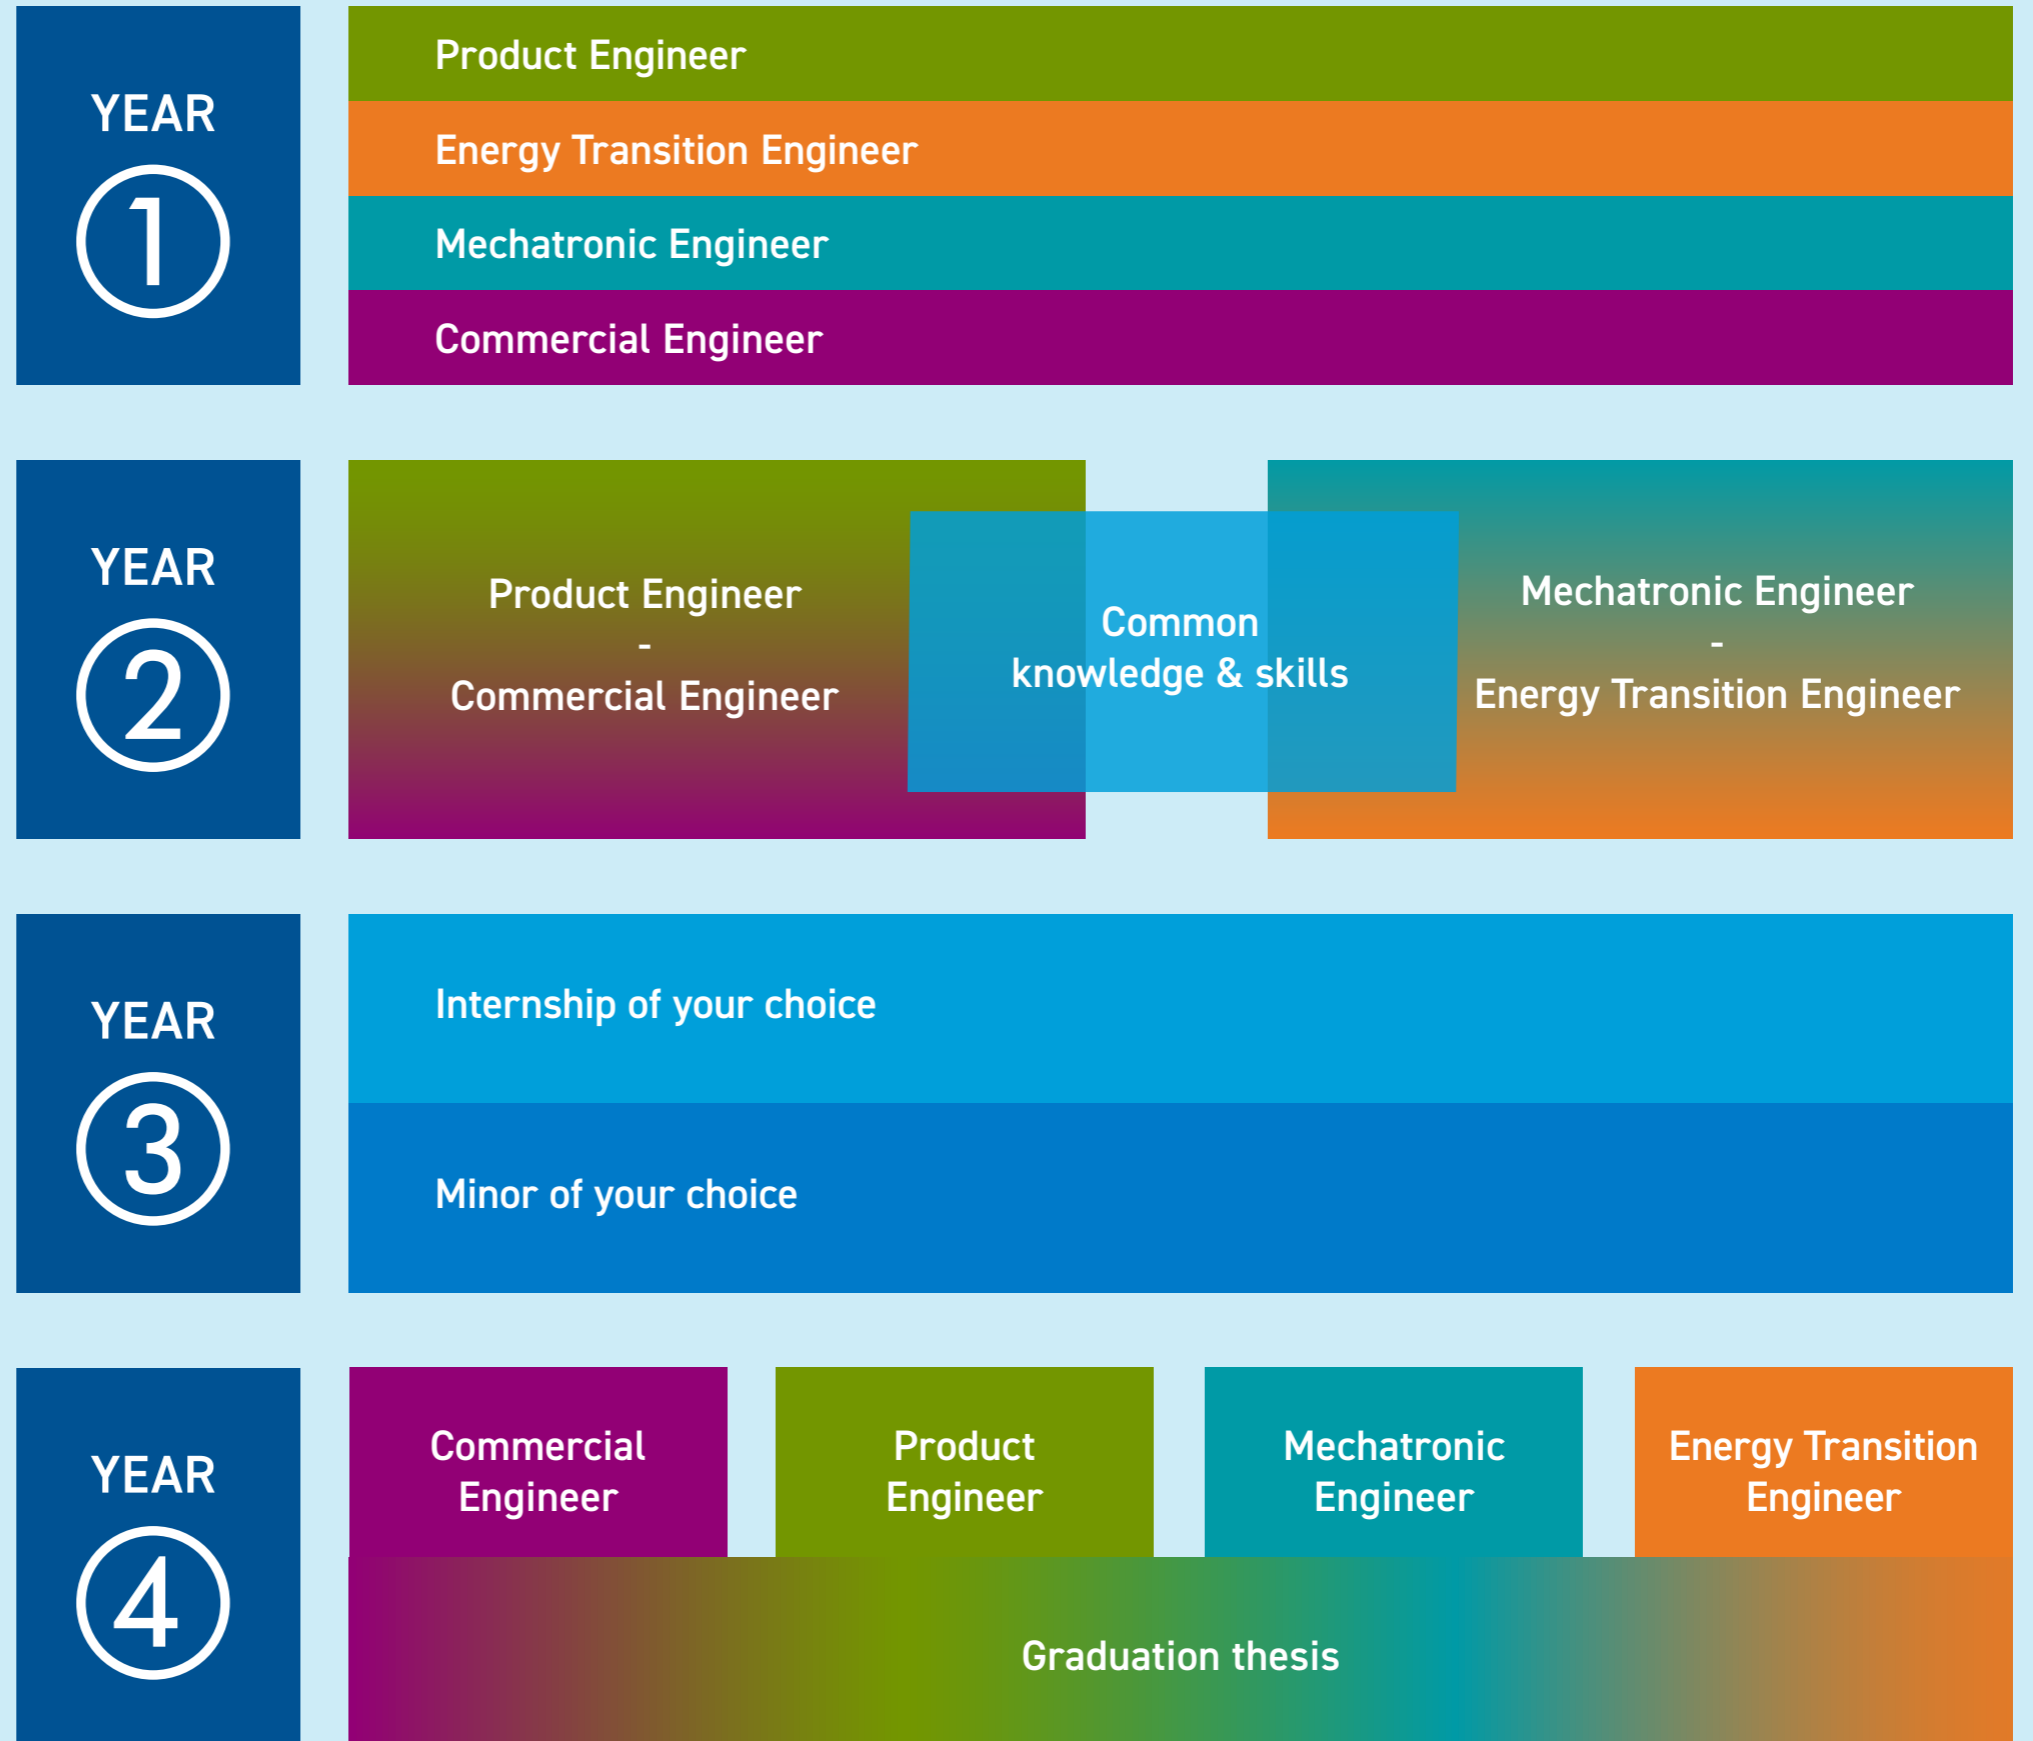

After year one, you will choose a field of study: the track Energy Transition Engineer and Mechatronic Engineer or the track Commercial Engineer and Product Engineer.

In the third year of the programme, you choose your minor and your internship at a company or lectorate. This enables you to deepen or broaden your knowledge and skills.

In the final year, you choose one of the 4 study tracks. In the first semester, you will have classes and projects. In the 2nd semester, you can choose your 'Graduation thesis', a subject at the intersections of your specialization.
